CLEANING MATS WITH LOGO

The economic development of Europe, which is the growing awareness of small and medium-sized enterprises has created the need for visual existence of economic entities. Therefore, there is a growing need to show the aesthetic characteristics of individual enterprises.

Mats with logo have been around for many years, but now, due to the great technical capabilities such as cutting with the waterjet method from various materials, in different colors and the permanent installation of graphic signs on aluminum strips, have opened a new chapter in the production of personalized mats. We have created the only collection of this type in the world and in Europe. Our idea and know-how are durable, comprehensive, spatial and colorful graphic designs mounted on aluminum profiles prepared for this purpose. The whole composition must give an individual, colorful aspect to the interior and ensure the indestructibility of materials for decades.

We cut various types of safe, durable carpet underlays based on polypropylene or polyamide technology based on previously consulted and completed projects. Then, stick them on the appropriate layers, stiffen and protect against delamination. We pre-select the division in the aspect of graphics and construction, and stick the strips of the finished logo permanently in to a resistant, acoustically protected aluminum profile. All these elements (profiles) connected by stainless steel cables create a spatial, attractive composition reflecting the graphic design.

These elements are an attractive solution for all entries of service and production facilities. They are used, among others in restaurants, hotels and other institutions. They are the decoration of an entrance and reflect the features of a given entrepreneur.

Personalized mats with the logo are extremely resistant to abrasion, washing and keep their service life for a period of 10 years (depending on the pedestrian of traffic and the method of cleaning). For many years, BELA has been manufacturing mats for world-famous companies such as Geox, Svarowski.
